Summary

Software engineer with Mathematics and Education background, building scalable web applications using TypeScript, Ruby on Rails, and React. Experienced in CI/CD pipelines, agile development, and code reviews with proven ability to quickly master new technologies. Applies analytical problem-solving to deliver maintainable, performant code with end-to-end ownership.

Technical Skills

Languages/Frameworks:

JavaScript, TypeScript, Python, Ruby, Node.js, React.js, Next.js, Vue.js, Ruby on Rails, HTML5, CSS

Testing/Quality Assurance:

Test Driven Development (TDD), Unit Testing, Cypress, RSpec, FactoryBot

Databases & APIs:

PostgreSQL, Redis, SQLite, RESTful API, JSON, XML, API Integration

Development Tools:

Git, GitHub, GitHub Actions, CircleCI, Webpack, Vite, npm, Postman, Chrome DevTools, Figma, JIRA, Heroku

Practices & Methodologie:

Object-Oriented Programming (OOP), Performance Optimization, Cross-Browser Compatibility, WCAG Standards, Observability & Monitoring, Agile/Scrum

Currently learning:

Kotlin, AWS, C#, Unity, Cursor

Education

Accredited Certificate Full-stack Development Turing School of Software and Design Denver, CO	05/2025
B.A. in Mathematics Minor in Computer Sciences Metropolitan State University of Denver Denver, CO	12/2022

Projects

Tracker - Agile Team

[Live Site](#) | [BE Repo](#) | [FE Repo](#)

Technologies: TypeScript, Ruby on Rails, ReactJS, PostgreSQL, CI/CD (CircleCI), RSpec, Cypress, Tailwind CSS

Description: Job tracking application that organizes contacts, target companies, and application status in a centralized dashboard

- Refactored frontend components to establish consistent design system and resolved 5+ UI bugs impacting user interactions, improving interface cohesion and reducing user friction
- Refactored codebase with isolated interfaces and maintained code quality standards, improving maintainability and scalability
- Integrated Tiptap editor for rich text formatting with 4+ styling options, managing state client-side to eliminate API integration bugs and ensure reliable note editing
- Conducted 15+ code reviews for team members, providing constructive feedback on React component architecture, TypeScript typing, and Rails API design patterns
- Resolved 20+ merge conflicts in CI/CD pipeline while maintaining 100% test pass rate, demonstrating strong Git workflow and collaborative development skills

RepRadar - Group Project

[Live Site](#) | [Repo](#)

Technologies: Ruby on Rails, ReactJS, PostgreSQL, API integration (5Calls API, Federal Register API), RSpec, Cypress

Description: Web application that helps users stay informed about executive orders and connect with their representatives using zip code search

- Architected React frontend with 20+ reusable components and WCAG-compliant design, implementing cross-browser compatibility and responsive layouts to ensure accessibility across devices
- Implemented 10+ Rails API endpoints to integrate external APIs (5Calls, Federal Register), normalize representative data for frontend display, and manage database persistence for user-saved contacts
- Facilitated team collaboration through 3+ daily code reviews and pair programming sessions, proactively debugging complex issues with teammates and strengthening team communication practices

Professional Experience

Student Teacher @ Denver Public Schools, Denver, CO	08/2017 - 12/2019
• Collaborated with cross-functional teams (teachers, counselors, administrators) to analyze student performance data and implement targeted interventions, improving outcomes for 20+ students across grades 9-12 • Developed and delivered 50+ technical lessons translating complex mathematical concepts into accessible knowledge for diverse learners, demonstrating clear communication essential for technical documentation and team collaboration
